

An Unlevel Playing Field

America's Gender-Based Wage Gap, Binds of Discrimination, And A Path Forward

APRIL 2015

Promoting fair pay and eliminating the gap between the wages of women and men in the United States is more important than ever. Women make up nearly half of the workforce¹ and are breadwinners in nearly two-thirds of families with children.² More than 15.2 million households are headed by women,³ and more than half of those women are single parents.⁴ Put simply: Women's wages are essential to families and the economy. Yet women, especially women of color and mothers, continue to lose precious income to a pervasive, gender-based wage gap.

This issue brief takes an in-depth look at the country's gender-based wage gap for full-time, year-round workers. It examines what the gender-based wage gap costs women and families, its demographic and geographic prevalence, and – in a new contribution to the literature on the impact of the wage gap – the pronounced disparities suffered by mothers overall, single mothers and mothers of color. It then outlines several changes that lawmakers, employers and individuals should make to help level the playing field and pave the way toward the fair and family friendly workplaces the country urgently needs.

Defining the Gap

Nationally, median pay for a woman working full time, year round is \$39,157 while median yearly pay for a man working full time, year round is \$50,033.⁵ This means that, overall, **women in the United States who work full time, year round⁶ are paid \$10,876 less annually than men who work full time, year round – or just 78 cents for every dollar.⁷**

Overall, the wage gap for women in the United States is pervasive, and its causes are multifaceted. The gap persists across industries,⁸ occupations⁹ and education levels¹⁰ and, when researchers have controlled for these and other factors, they have found an unexplained portion partially attributable to bias or discrimination.¹¹ These data suggest a widespread, deep-rooted problem, with significant costs for America's women, families, businesses and economy.

Importantly, the data discussed in this brief focus on only a subset of working women and men: those who work full time and year round. This allows any differential in wages due to hours worked to be held relatively constant. However, in reality, women are significantly more likely than men to work part time, or less than 35 hours per week.¹² What the wage

gap means for families when women work less than full time is worthy of further study and will be the subject of future analysis.

THE WAGE GAP HAS TANGIBLE CONSEQUENCES

As a group, women who are employed full time in the United States lose more than \$490 billion to the wage gap every year.¹³ A loss of that magnitude harms the economy and has real financial consequences for women and their families. It can affect families' ability to afford basic necessities like food, housing, utilities and gasoline, and it means less money to spend on goods and services that drive economic growth.

For example, if the wage gap were eliminated, on average, a woman working full time, year round would have enough money for approximately:

- ▶ 86 more weeks of food for her family (1.6 years' worth);¹⁴
- ▶ 7.6 more months of mortgage and utilities payments;¹⁵
- ▶ 12 more months of rent;¹⁶ or
- ▶ 4,534 additional gallons of gas.¹⁷

THE WAGE GAP EXISTS ACROSS RACE AND ETHNICITY

The country's gender-based wage gap persists for white women and across communities of color. For African American women and Latinas, the annual losses are staggering. African American women who work full time, year round are paid only 64 cents for every dollar paid to white, non-Hispanic men.¹⁸ And Latinas who work full time, year round are paid just 56 cents for every dollar paid to white, non-Hispanic men.¹⁹ For Asian American women who work full time, year round, the wage gap is smaller but still punishing. On average, Asian American women are paid just 79 cents for every dollar paid to white, non-Hispanic men.²⁰ Table 1 shows a breakdown of the wage gap for women by race.

Table 1. The Wage Gap for Women Working Full Time, Year Round by Race/Ethnicity (2014)

	Annual Median Wages	Difference Compared to White, Non-Hispanic Men (\$53,488)	Ratio (Cents On the Dollar)
Asian American Women	\$42,335	\$11,153	0.79
White Women	\$41,398	\$12,090	0.77
African American Women	\$34,089	\$19,399	0.64
Latinas	\$30,209	\$23,279	0.56

THE WAGE GAP SPANS ALL 50 STATES

The wage gap also varies by state. In Louisiana, the state with the largest gap, full-time working women are paid, on average, 66 cents for every dollar paid to men. The District of Columbia's gap is the smallest, with women who work full time, year round paid 91 cents for every dollar paid to men.²¹ Still, women in the District lose \$5,850 each year that could go toward basic necessities. For more information on the wage gap in each state and the District of Columbia, see Appendix B.

Some of these differences can be attributed to the industries that are dominant in the states. Even though the wage gap exists regardless of industry, women in some industries do better or worse than others. In the manufacturing industry, for example, women are paid just 73 cents for every dollar paid to men,²² so a state with more manufacturing jobs may have a larger wage gap. In places like the District of Columbia, where government jobs make up 25 percent of employment,²³ the gap is narrower – in part, because the wage gap among federal employees is narrower.²⁴

The wage gap also varies for women of color by state.²⁵ Appendices C, D and E break down the wage gap for African American women, Asian American women and Latinas, respectively, in the 20 states with the largest populations of each group that work full time, year round. Across these states and groups, the finding is the same: a punishing gap that threatens the economic security of women and families, and states' economies overall.

The Double and Triple Binds of Discrimination

As noted, the pervasive wage gap is the result of several influences, but a portion of it cannot be explained away by industry, occupation, education level or other factors. Analysts often attribute the unexplained portion to discrimination rooted in deep biases and longstanding stereotypes about women in the workplace.²⁶ In particular, “sex-plus” discrimination is a form of bias that exists when a person is subjected to disparate treatment based on sex in conjunction with one other characteristic, such as pregnancy, marital status, race/ethnicity or caregiving responsibilities.²⁷ And it can have a serious impact on women's wages.

Sex stereotypes related to motherhood and caregiving can affect women regardless of their current maternal status. Studies have shown that stereotypes about women as mothers or caregivers can mean they are less likely to be hired, perceived as competent, or paid as much as male colleagues with the same qualifications.²⁸ And even though Title VII of the 1964 Civil Rights Act, as amended, and guidance²⁹ from the U.S. Equal Employment Opportunity Commission protect against this kind of discrimination, it remains a significant problem.³⁰

The situation can put women in a double and even triple bind of discrimination that can affect women's compensation. Mothers can suffer from discrimination based on sex plus caregiving responsibilities.³¹ Women of color suffer from discrimination based on sex plus race.³² And larger disparities for single mothers and mothers of color may be explained, in part, by discrimination based on sex plus caregiving plus marital status or race,

respectively. These are important considerations when defining and addressing the wage gap.

THE DOUBLE BIND FOR MOTHERS – THE “MOTHERHOOD PENALTY”

Many researchers now believe that motherhood is a critical factor in the gender-based wage gap.³³ Nearly 85 percent of women will become mothers at some point in their working lives.³⁴ Yet median pay for mothers in the United States who work full time, year round is \$39,000 per year, compared to median pay of \$55,000 annually for fathers who work full time, year round.³⁵ This means that **mothers in the United States who hold full time, year round jobs are paid \$16,000 less annually than fathers who work full time, year round – or just 71 cents for every dollar** (Figure 1).³⁶ Closing this gap would help millions of families afford basic necessities.

If the wage gap were eliminated, on average, a mother working full time, year round would have enough money for approximately:

- ▶ 126 more weeks of food for her family (2.4 years' worth);³⁷
- ▶ 11 more months of mortgage and utilities payments;³⁸
- ▶ 18 more months of rent;³⁹
- ▶ 25 more months of child care;⁴⁰ or
- ▶ 6,669 additional gallons of gas.⁴¹

The so-called “motherhood penalty” – the negative effects mothers experience in the workplace compared to women without children, including disparities in pay and promotions – has been well-established for decades and continues to be reflected in U.S. Census Bureau data.⁴² Men do not experience a comparable “fatherhood penalty.” In fact, when it comes to pay in particular, evidence suggests men’s wages are unaffected or even increase after having a child.⁴³

Some attribute this penalty, and the wage gap overall, to the time women tend to take away from formal education and jobs to have and care for children. By contrast, men’s education and workforce attachment is not interrupted as frequently when they have children. Stereotypes about men as their families’ breadwinners may also lead to employers

Spotlight on Child Care

Eleven million children under the age of five are in some form of child care in the United States, and a year of child care costs, on average, more than a year of in-state tuition at most colleges. This puts significant strain on parents of young children who have to spend a large percentage of their income on child care.

Median pay for a mom who works full time, year round and has a child under six is \$40,000. That means that, **for the typical mother with child care expenses, closing the wage gap would mean the ability to pay for 18 additional months of child care.**

The high cost of child care hits low-income women and single mothers especially hard. Based on median child care costs, child care can amount to 37 percent of a single mother’s monthly budget.

Source: National Partnership calculation based on the national median cost of providing child care for a four-year-old. Child Care Aware of America. (2013, December). *Parents and the High Cost of Child Care: 2014 Update, Appendix 1*. Available at www.naccrra.org/costofcare.

increasing men's wages after a child arrives.⁴⁴ Despite women's roles as breadwinners, they do not benefit from the same perception.⁴⁵

But the explanation for the motherhood penalty is even more complex: Mothers may be paid less than fathers and women without children because the country lacks supportive workplace policies, such as paid family and medical leave, paid sick days, predictable or flexible scheduling, and better and more affordable child care. Without these supports, women with caregiving responsibilities experience more job interruptions and fewer opportunities for advancement,⁴⁶ which can have a negative effect on wages that compounds over time.

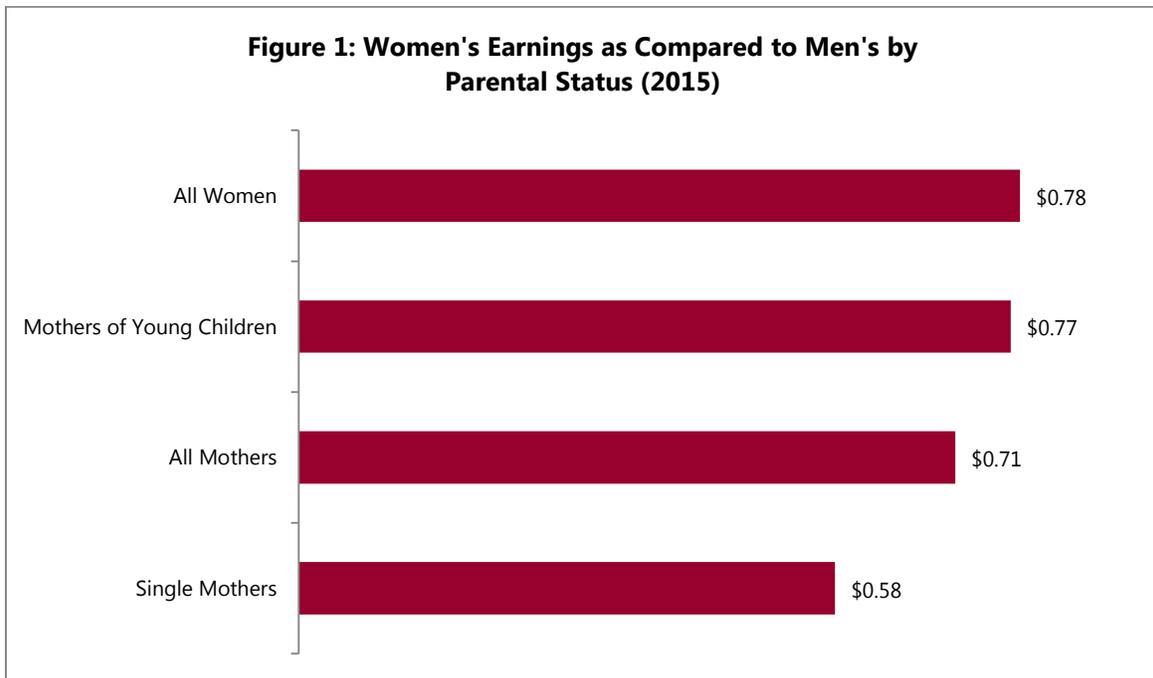

THE TRIPLE BIND FOR SINGLE MOTHERS

When mothers face a wage penalty, the economic consequences can be great. When *single* mothers – mothers who head a household and have never married or are divorced, separated or widowed – face a wage penalty, the economic consequences can be especially dire, in particular because many are the sole breadwinners for their families. Median pay for single mothers who work full time, year round in the United States is \$32,115 per year, compared to median pay of \$55,000 annually for fathers who work full time, year round.⁴⁷ This means that **single mothers who work full time, year round in the United States are paid \$22,885 less annually than fathers who work full time, year round – or just 58 cents for every dollar.**⁴⁸

In starker terms, single mothers are working as hard as any parent to provide for their families, but with wages that are less than 60 percent as much as those paid to fathers. And the consequences are significant. If the wage gap were eliminated, on average, a single mother working full time, year round would have enough money for approximately:

- ▶ 180 more weeks of food for her family (3.5 years' worth);⁴⁹
- ▶ 16 more months of mortgage and utilities payments;⁵⁰
- ▶ 25 more months of rent;⁵¹
- ▶ 35 more months of child care;⁵² or
- ▶ 9,539 additional gallons of gas.⁵³

For single mothers, this motherhood penalty is likely attributable, in part, to the triple bind of discrimination based on sex plus caregiving plus marital status. The penalty is also closely associated with poverty.⁵⁴ In 2013, 7.2 percent of all households in the United States were single mother households.⁵⁵ Nearly half of households headed by a single breadwinning mother (46.7 percent) had incomes in the bottom quintile (those making \$27,795 or less annually). That is compared to less than one-tenth of households that included a married breadwinning mother (8.5 percent).⁵⁶

Note: Each point in the chart above compares women to men and mothers to fathers who work full time, year round. "Full time" is defined as working 35 hours per week or more. Young children are those considered under the age of six. "Single" includes women who have never married or are separated, divorced or widowed and are the head of household.

THE TRIPLE BIND FOR MOTHERS OF COLOR

Although many employed women deal with caregiving responsibilities, women of color are more likely to be caregivers – and, therefore, are more likely to experience a triple bind of sex-plus discrimination, regardless of whether they are in one- or two-parent households. Both African American women and Latinas are more likely to be raising children in a single-parent household than are white or Asian American women.⁵⁷ Women of color also may devote more time than their white counterparts to caring for extended family members,⁵⁸ including both grandchildren⁵⁹ and elderly relatives.

When discrimination based on sex, caregiving responsibilities and race combine, mothers of color and their families pay a grievous price. They are critical – often sole – breadwinners for their families while getting paid a fraction of what white male breadwinners are paid. Families in which Latinas contribute to or are solely responsible for their household's income face the greatest financial challenges: On average, Latina mothers who work full time, year round are paid just 49 cents to every dollar paid to white, non-Hispanic men who work full time, year round.⁶⁰

Table 2 shows the median pay of working women with children by race and ethnicity, the wage gap for each, and what families could afford in practical terms if that gap were closed. For example, if the wage gap between African American mothers who work full time, year round and white, non-Hispanic fathers who work full time, year round were eliminated, an African American working mother could afford 19.5 more months of mortgage payments,⁶¹ 43 more months of child care⁶² or more than 11,600 additional gallons of gasoline.⁶³

Table 2. The Wage Gap Between Mothers and Fathers Who Work Full Time, Year Round and Its Impact in Practical Terms

	Mother's Median Annual Pay	Father's Median Annual Pay	Annual Difference	Ratio (Cents On the Dollar)	Food⁶⁴	Mortgage Payments⁶⁵	Rent⁶⁶	Child Care⁶⁷	Gasoline⁶⁸
Asian American Working Mothers	\$45,000	\$61,000	\$16,000	.74	126	11	18	25	6,669
All Working Mothers	\$39,000	\$55,000	\$16,000	.71	126	11	18	25	6,669
White Working Mothers	\$43,000	\$61,000	\$18,000	.70	142	12.5	20	28	7,503
African American Working Mothers	\$33,000	\$61,000	\$28,000	.54	221	19.5	31	43	11,672
Latina Working Mothers	\$30,000	\$61,000	\$31,000	.49	244	21.6	34	48	12,922

Note: Median annual pay is calculated for all full-time, year-round working mothers and fathers. Asian American mothers', white mothers', African American mothers' and Latina mothers' median annual pay is compared to white, non-Hispanic fathers' median annual pay. Food, mortgage, rent and child care figures are the additional number of months of essential payments a woman could purchase if the wage gap between men and women's wages were eliminated. Gasoline figures are the additional number of gallons a woman could purchase if the wage gap were eliminated.

The Way Forward

To date, the data and research make clear that America's gender-based wage gap persists and continues to punish women, families, businesses and the economy – despite the Equal Pay Act of 1963, Title VII of the Civil Rights Act and other workplace protections for women. A lack of supportive public and private workplace policies, occupational segregation, bias, harassment and stereotypes all conspire to make fair and equal pay elusive. But there is a way forward.

The keys to closing the wage gap include ensuring that women have access to good jobs that pay decent wages, the support and protections they need to stay and advance in their careers and fair and nondiscriminatory treatment wherever they work, in whatever jobs they have. These changes require a number of solutions from lawmakers, employers and individuals. The suggestions below provide a roadmap to help get there.

STEP ONE: CREATE A PIPELINE TO GOOD JOBS AND HIGHER WAGES

At every skill level, women need better-paying jobs. Women are disproportionately represented in the fastest-growing low-wage jobs.⁶⁹ But at the same time, women are more likely than men to complete college. Still, according to the most recent data available, one year after college graduation, women who worked full time were paid, on average, 82 percent of what men were paid.⁷⁰

Barriers women face in entering or staying in “nontraditional” and higher-paying industries must be eliminated. Even though women comprise nearly half of the U.S. workforce, women only make up one-quarter of workers in science, technology, engineering and math (STEM) jobs,⁷¹ which tend to pay higher wages. Stereotypes, gender bias, discrimination, harassment and a lack of female mentors often dissuade women from entering or staying in STEM or other “nontraditional” jobs like construction and manufacturing.⁷²

Changing this will require:

- ▶ Lawmakers to raise the federal minimum wage rate and employers to voluntarily set wage levels that go beyond the minimum wage. Women comprise more than two-thirds of minimum wage workers.⁷³ And states with higher minimum wage rates have smaller wage gaps.⁷⁴ Raising the federal minimum wage would go a long way toward closing the gender-based wage gap.⁷⁵
- ▶ Public policies that incentivize and employers that take the initiative to develop resources for apprenticeship, training and mentoring programs to get women into STEM and nontraditional jobs and create environments in which women feel comfortable staying in those jobs, with strong enforcement of nondiscrimination and sexual harassment laws and policies.
- ▶ Educators and mentors to encourage young women to pursue majors in engineering, health care fields, and computer and information sciences, which are some of the best-paying majors.⁷⁶

STEP TWO: ENCOURAGE AND SUPPORT THE RETENTION AND ADVANCEMENT OF WOMEN IN THE WORKPLACE

Women are nearly half the workforce and breadwinners in nearly two-thirds of families, yet workplace policies have not kept pace. Pregnancy discrimination laws only protect some pregnant women when they need minor on-the-job modifications, and that forces too many to leave their jobs just when they need income and stability most. Leave policies, particularly for new parents and family caregivers, are absent or insufficient, and low-wage workers are hit the hardest. Scheduling challenges – the inability to request or receive a schedule that is stable, predictable and offers sufficient hours – are also all too common.⁷⁷

The mismatch between working families’ needs and supportive policies disproportionately harms women, who continue to bear more responsibility for the health and care of children and elders in their families. In order to close the wage gap, workplaces need to be more supportive of working women’s – and men’s – family responsibilities.

Doing this will require:

- ▶ Lawmakers and employers to help ensure that pregnant workers are not forced off the job or placed on unpaid leave because they require minor accommodations to protect their health and the health of their pregnancies. The Pregnant Workers Fairness Act, and similar state and local laws, would help ensure that most women who have known limitations related to pregnancy, childbirth and related medical conditions receive the minor workplace accommodations they need to keep working. These and employers' own policies are important steps toward equal opportunity for pregnant workers.
- ▶ Lawmakers to ensure that all workers have access to paid family and medical leave. When new mothers have paid leave, they are more likely to be working in the year after their child's birth, to return to their employer and to receive higher wages over time.⁷⁸ When men have paid leave, they are more involved in their child's care, share household responsibilities and promote female partners' workforce participation.⁷⁹ The Family And Medical Insurance Leave (FAMILY) Act would create a national family and medical insurance program that is modeled on successful and effective state paid family leave and temporary disability insurance programs.
- ▶ Lawmakers to ensure that no worker loses pay or her or his job because they do not have paid sick time to recover from the flu, care for a sick child or family member, address domestic violence or seek preventive health care. This is especially important for women because they are much more likely than men to take charge of children's health care, to miss work when a child is sick and to lose wages when they do so.⁸⁰ The Healthy Families Act would establish a national paid sick days standard, building on laws enacted in more than 20 states and cities.
- ▶ Lawmakers to enact sensible protections against inflexible, unpredictable and unstable schedules that make it difficult or impossible for working people to arrange stable child care, provide care to children or elders, seek education or training or hold a second job. Women are disproportionately impacted by these policies because they are concentrated in lower-wage, inflexible jobs⁸¹ and also tend to bear responsibility for family caregiving.⁸² The Schedules That Work Act would give workers more control over their schedules and offer predictability and stability in shifts and work hours.
- ▶ Lawmakers to expand access to child care for all families and to make the cost of quality child care less burdensome for parents, especially those who need stable, affordable and high-quality care in order to stay at and advance in their jobs. Because women are disproportionately responsible for making and maintaining child care arrangements, they're also most impacted when child care arrangements are insufficient or fall through.⁸³
- ▶ Employers to create paid family and medical leave and paid sick days policies in the absence of – or in addition to – public policies that meet the needs of their workforce. Employers must also train managers and supervisors in best practices so that employees feel comfortable taking the leave that is offered.
- ▶ Employers to adopt best practices for scheduling, giving workers control and predictability over their schedules in a way that helps create the stability they need to stay and advance on the job.
- ▶ Employers to promote wage and benefit rates for part-time workers based on wages and benefits paid to full-time workers.

- ▶ Employers to recognize working families' child and elder care challenges and help women and men meet those challenges through dependent care accounts, onsite or offsite child care and backup care for families when their usual care arrangements fall through.

STEP THREE: HELP ENSURE FAIR, NONDISCRIMINATORY TREATMENT AT WORK

In order for women to achieve full workplace and wage equality, they must receive fair treatment in workplaces that are welcoming and safe. Yet, too often, explicit and more veiled forms of bias make it impossible for women to succeed. Whether women are victims of unlawful discrimination, retaliation, harassment or stereotyping, or are not empowered or supported in negotiating for the wages, benefits and positions they deserve, unfair treatment – and the fear of unfair treatment – is a significant impediment to wage equality.

Changing this will require:

- ▶ Lawmakers and employers to protect workers who choose to share salary information with co-workers and create stronger penalties for employers who engage in wage discrimination based on sex. About half of all workers report that the discussion of wage and salary information is either discouraged or prohibited in their workplace and/or could lead to punishment.⁸⁴ But knowledge can be a powerful tool. In the federal government, where salary bands are disclosed, the wage gap between women and men is 11 cents rather than the national 22 cents.⁸⁵ The Paycheck Fairness Act would make it harder for employers to hide pay discrimination, reward employers that have good pay practices and help train women and girls in salary negotiation. Several states have led the way by prohibiting retaliation against workers who share their pay information with co-workers.
- ▶ Lawmakers and employers to ensure comparable pay for jobs that require the same skills, abilities and education. Men and women should be compensated equally for work requiring comparable skills, responsibilities and effort, but too often the tendency is to pay workers in predominantly female jobs less than workers in predominantly male jobs with comparable skill levels.⁸⁶ Proposed legislation such as the federal Fair Pay Act, would prohibit pay discrimination against workers in “equivalent” jobs whose composite of skill, effort, responsibility and working conditions are equivalent in value even if the jobs are not identical. Some states have passed fair pay laws like this that affect employers seeking state contracts.
- ▶ Lawmakers, agencies and employers to crack down on discrimination on the basis of sex, pregnancy, caregiving or family responsibilities through expansions and strong enforcement of civil rights protections. The U.S. Equal Employment Opportunity Commission must vigorously enforce existing protections under Title VII of the Civil Rights Act of 1964, the Equal Pay Act of 1963 and the Americans with Disabilities Act of 1990. And the U.S. Department of Labor Wage and Hour Division must vigorously enforce protections against interference and discrimination for taking leave under the Family and Medical Leave Act of 1993.
- ▶ Employers to ensure adequate training for managers and supervisors on sex stereotyping, implicit gender bias and proper procedures for responding to wage

claims, discrimination claims, family and medical leave requests, and requests under the Americans with Disabilities Act.

- ▶ Employers to promote workplaces that are free from harassment and violence and safe for women – and all – workers. Ninety percent of women working outside of the home will experience sexual harassment at some point in their working lives, and nearly half (49 percent) of women in the workforce have experienced unwanted sexual attention.⁸⁷ Employers should implement programs to identify potential risks of workplace violence and implement corrective measures.
- ▶ Workers to take collective action to negotiate compensation, including by joining together to unionize their workplaces. A significant benefit of collective action is that women in unions have a narrower wage gap than nonunion women.⁸⁸ Union women are also more empowered in their workplaces and may have protections against retribution when negotiating their salary, benefits, raises, promotions and bonuses.

Conclusion

If the United States continues on its current course, experts estimate that it will take another 43 years for the gender-based wage gap to close.⁸⁹ At that point, even women new to the workforce today will be nearing retirement. Women – especially mothers, single mothers and mothers of color – and the families that rely on them cannot wait another four decades for fair and equal pay, and neither can the country. America’s families and our state and national economies need strong, comprehensive action to close the wage gap now.

Appendix A. Methodology

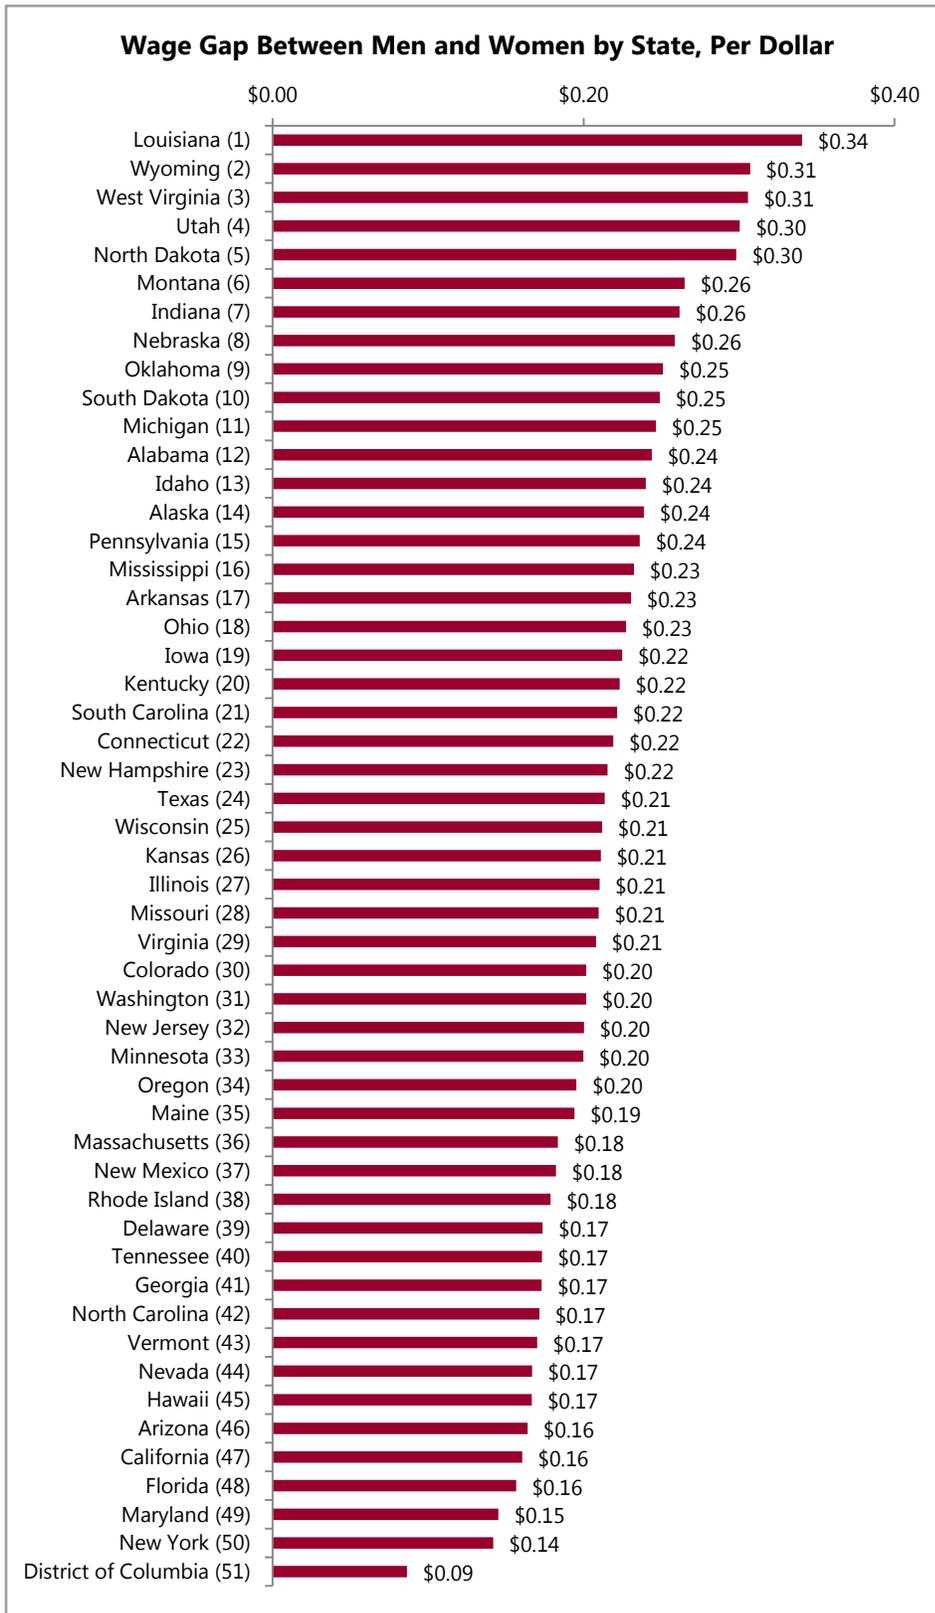

The National Partnership for Women & Families calculated the gender-based wage gap by comparing the median annual wages of women and men who worked full time, year round using the March 2014 Current Population Survey, Annual Social and Economic Supplements (ASEC). The ASEC is the primary source of annual data on the structure and economic well-being of American families.

The ASEC is a national survey of more than 75,000 households and is the source of annual income, migration statistics, poverty, work experience, noncash benefits and health insurance data used in this brief. The ASEC is sponsored by the U.S. Bureau of Labor Statistics, the U.S. Census Bureau and the U.S. Department of Health and Human Services. The survey contains detailed questions covering social and economic characteristics of each person who is a household member as of the interview date. Income questions refer to income received during the previous calendar year.

The data used in these analyses is courtesy of Miriam King, Steven Ruggles, J. Trent Alexander, Sarah Flood, Katie Genadek, Matthew B. Schroeder, Brandon Trampe and Rebecca Vick. Integrated Public Use Microdata Series, Current Population Survey: Version 3.0. [Machine-readable database]. Minneapolis: University of Minnesota. Further information about the IPUMS is available at <https://usa.ipums.org/usa/index.shtml>.

The IPUMS-CPS samples are weighted, with some records representing more cases than others. Weight variables allow researchers to create accurate population estimates using weighted samples. As recommended by the U.S. Census Bureau's Fertility and Family Statistics Branch, the National Partnership used personal weights to obtain nationally representative statistics for person-level analyses.

Appendix C. The Wage Gap for African American Women by State

An analysis of the wage gap in the 20 states with the largest number of African American women who work full time, year round (ranked from largest to smallest cents-on-the-dollar gap)					
State	Number of African American Women Working Full Time, Year Round	Median Wages for African American Women	Median Wages for White, Non-Hispanic Men	Annual Wage Gap	Cents On the Dollar
Louisiana	207,277	\$26,365	\$53,734	\$27,369	0.49
Mississippi	148,368	\$25,327	\$45,801	\$20,474	0.55
Alabama	181,486	\$28,319	\$49,901	\$21,582	0.57
South Carolina	185,211	\$27,348	\$47,499	\$20,151	0.58
New Jersey	188,009	\$42,128	\$72,160	\$30,032	0.58
Virginia	262,842	\$35,322	\$60,211	\$24,889	0.59
Texas	490,809	\$34,764	\$59,248	\$24,484	0.59
Florida	447,313	\$30,106	\$48,786	\$18,680	0.62
Georgia	457,531	\$32,241	\$51,434	\$19,193	0.63
North Carolina	310,251	\$30,417	\$48,502	\$18,085	0.63
Illinois	245,450	\$37,399	\$58,993	\$21,594	0.63
California	292,565	\$44,035	\$69,004	\$24,969	0.64
Ohio	184,887	\$32,250	\$49,525	\$17,275	0.65
Michigan	160,666	\$34,027	\$51,397	\$17,370	0.66
New York	486,704	\$40,395	\$60,939	\$20,544	0.66
Indiana	74,248	\$32,225	\$48,085	\$15,860	0.67
Missouri	98,632	\$31,328	\$45,930	\$14,602	0.68
Tennessee	163,996	\$31,142	\$45,234	\$14,092	0.69
Pennsylvania	183,517	\$35,595	\$51,340	\$15,745	0.69
Maryland	337,063	\$47,081	\$67,581	\$20,500	0.70

Appendix D. The Wage Gap for Asian American Women by State

An analysis of the wage gap in the 20 states with the largest number of Asian American women who work full time, year round (ranked from largest to smallest cents-on-the-dollar gap)					
State	Number of Asian American Women Working Full Time, Year Round	Median Wages for Asian American Women	Median Wages for White, Non-Hispanic Men	Annual Wage Gap	Cents On the Dollar
Minnesota	33,095	\$37,149	\$52,905	\$15,756	0.70
Nevada	37,563	\$37,510	\$52,705	\$15,195	0.71
Washington	77,527	\$42,414	\$59,302	\$16,888	0.72
Georgia	45,863	\$36,835	\$51,434	\$14,599	0.72
California	780,475	\$50,368	\$69,004	\$18,636	0.73
Colorado	23,725	\$41,427	\$56,524	\$15,097	0.73
Hawaii	96,322	\$38,654	\$52,122	\$13,468	0.74
Florida	76,960	\$36,488	\$48,786	\$12,298	0.75
North Carolina	32,104	\$36,477	\$48,502	\$12,025	0.75
Arizona	29,263	\$41,515	\$52,755	\$11,240	0.79
Massachusetts	58,490	\$51,185	\$64,874	\$13,689	0.79
Texas	161,143	\$46,792	\$59,248	\$12,456	0.79
Pennsylvania	52,904	\$40,923	\$51,340	\$10,417	0.80
New York	228,117	\$49,453	\$60,939	\$11,486	0.81
Maryland	61,190	\$56,913	\$67,581	\$10,668	0.84
Virginia	80,176	\$50,936	\$60,211	\$9,275	0.85
Ohio	29,185	\$41,984	\$49,525	\$7,541	0.85
New Jersey	124,404	\$61,522	\$72,160	\$10,638	0.85
Illinois	97,508	\$50,806	\$58,993	\$8,187	0.86
Michigan	30,796	\$49,185	\$51,397	\$2,212	0.96

Appendix E. The Wage Gap for Latinas by State

An analysis of the wage gap in the 20 states with the largest number of Latinas who work full time, year round (ranked from largest to smallest cents-on-the-dollar gap)					
State	Number of Latinas Working Full Time, Year Round	Median Wages for Latinas	Median Wages for White, Non-Hispanic Men	Annual Wage Gap	Cents On the Dollar
California	1,465,353	\$30,078	\$69,004	\$38,926	0.44
New Jersey	215,328	\$31,538	\$72,160	\$40,622	0.44
Texas	1,115,438	\$26,196	\$59,248	\$33,052	0.44
North Carolina	70,665	\$22,456	\$48,502	\$26,046	0.46
Washington	72,511	\$27,584	\$59,302	\$31,718	0.47
Maryland	66,587	\$31,466	\$67,581	\$36,115	0.47
Illinois	226,104	\$27,531	\$58,993	\$31,462	0.47
Connecticut	57,205	\$32,273	\$67,989	\$35,716	0.47
Georgia	81,465	\$24,752	\$51,434	\$26,682	0.48
Massachusetts	71,222	\$32,209	\$64,874	\$32,665	0.50
Oregon	39,609	\$25,848	\$50,941	\$25,093	0.51
Virginia	90,478	\$31,133	\$60,211	\$29,078	0.52
Nevada	87,229	\$28,136	\$52,705	\$24,569	0.53
Arizona	208,369	\$28,283	\$52,755	\$24,472	0.54
Colorado	118,969	\$30,429	\$56,524	\$26,095	0.54
New York	434,890	\$33,172	\$60,939	\$27,767	0.54
Michigan	41,598	\$27,999	\$51,397	\$23,398	0.54
Pennsylvania	73,752	\$28,188	\$51,340	\$23,152	0.55
New Mexico	116,655	\$29,228	\$53,085	\$23,857	0.55
Florida	597,537	\$29,012	\$48,786	\$19,774	0.59

- 11 Corbett, C., & Hill, C. (2012). *Graduating to a Pay Gap: The Earnings of Women and Men One Year after College Graduation*. American Association of University Women Publication. Retrieved 9 April 2015, from <http://www.aauw.org/files/2013/02/graduating-to-a-pay-gap-the-earnings-of-women-and-men-one-year-after-college-graduation.pdf>. AAUW found that, even after controlling for a number of contributing factors – chosen major, type of job, number of hours worked each week – a seven percent wage gap persists. Likewise, a 2009 report from the Government Accountability Office (GAO) which focused on federal workers similarly found an average pay gap of seven percent that could not be explained by occupational or other factors. GAO said its analysis “neither confirms nor refutes the presence of discriminatory practices.” Government Accountability Office. (2009, April). *Converging Characteristics of Men and Women in the Federal Workforce Help Explain the Narrowing Pay Gap*. Testimony before the Joint Economic Committee, U.S. Congress. Retrieved 9 April 2015, from <http://www.bls.gov/opub/reports/cps/highlights-of-womens-earnings-in-2013.pdf>. In 2013, 26 percent of all female wage and salary workers worked part time, compared to 13 percent of men. There are several factors that contribute to this, including a lack of full-time jobs, choice (for those who can afford it), and the fact that part-time schedules are better aligned with women’s child and elder care responsibilities. See Compton, J., & Pollak, R. A. (2014). Family proximity, childcare, and women’s labor force attachment. *Journal of Urban Economics*, 79, 72-90.; Shreffler, K. M., & Johnson, D. R. (2013). - 18 See note 5. The analysis uses a comparator of women of color to white, non-Hispanic men to best quantify the impact of race or ethnicity and sex on economic opportunity, and methodologically, it is helpful to have a single benchmark. However, even when the wages of African American, Latina and Asian American women are compared to all men, the wage gap is significant.
